

Selvatica Direct Booking Suite V1

Setup Guide

This guide helps you customize the booking system for your property without building a full software backend.

1. Open the editable file

Open `editable-config.js`. This is where you customize the property name, WhatsApp number, room names, prices, images, amenities and blocked dates.

2. Update property details

Change `propertyName`, `whatsappNumber`, `currency`, `badge`, `heroTitle`, `heroSubtitle` and `heroImage`.

3. Update rooms

Each room has a name, price, image, description, amenities and `blockedDates`. Duplicate a room block if you need more rooms.

4. Use the correct WhatsApp format

Use country code with no plus sign. Example: +57 300 000 0000 becomes 573000000000.

5. Block unavailable dates

Use `blockedDates` to hide unavailable rooms from search results. Format: YYYY-MM-DD.

6. Test the system

Open `booking-system.html` in a browser. Choose dates, view rooms and click Book via WhatsApp.

7. Upload to your website

Upload `booking-system.html` and `editable-config.js` together. If you use local images, upload the `assets` folder too.

Example room block

```
{
  id: "jungle-suite",
  name: "Jungle Suite",
  price: 120,
  image: "https://your-image-url.com/photo.jpg",
  description: "Private jungle view and king bed.",
  amenities: ["King bed", "Private bath", "Jungle view"],
  blockedDates: ["2026-05-10", "2026-05-11"]
}
```

Quick checklist before publishing

Item	Status
Property name updated	
WhatsApp number updated	
Room names updated	
Prices updated	
Images updated	
Blocked dates added	
WhatsApp test completed
